PREFACE

Article 30(2) of the Broadcasting Act, Chapter 350 of the Laws of Malta, requires the Broadcasting Authority to make and transmit to the Prime Minister a report that includes the results of independent audience research which ascertains:

- (a) the state of listenership or viewership of broadcasting services provided in Malta;
- (b) the state of public opinion concerning programmes included in broadcasting services provided in Malta;
- (c) any effects of such programmes on the attitudes or behaviour of those who watch them; and
- (d) the types of programmes that members of the public would like to be included in broadcasting services provided in Malta.

In order to give effect to the above, the Broadcasting Authority has commissioned the National Statistics Office to compile data through telephone interviews during the period October 2009 – September 2010 that is representative of the whole population. This report contains the analysis of these interviews for the period **1st July to 30th September 2010**.

Part One of the report details the analysis of the data collected and includes the questionnaire used; the classification of localities in the Maltese Islands by district as found in this particular work; latest demographic data of the Maltese population as published by the National Statistics Office; a list of nationwide radio and television stations and community radio stations licensed by the Broadcasting Authority during this period; as well as a technical section on the calculation of values in absolute numbers.

The calculation of absolute numbers for each period depends on the latest demographic data published annually by the N.S.O. which in themselves are calculated on the latest Population Census [2005] adjusted with total live births, deaths, marriages, data on separations, registered annulments, divorces obtained abroad and figures on migration [N.S.O. PR 122/2009; Methodological Notes]. With regard to population distribution by district, the percentages per district are calculated on the Population Census of 2005. For this reason, only an estimate of absolute numbers of radio and television audiences can be made. In view of this, the value of 1% in each table is given in italics and no absolute numbers are published. Once total demographic figures are published by the N.S.O. which are representative of this period under review, absolute figures can then be reworked on the data published in the technical report, Appendix F.

On 10th July 2009, the National Statistics Office issued a Press Release No. 122/2009 for “World Population Day: 2009” releasing a set of demographic statistics as at December 2008. These statistics were used for the estimate computation of extrapolated population percentages and back-worked for the

previous two assessment periods of Oct-Dec 2008 and Jan-March 2009, as listed in Appendix F of this report.

Part Two of the report details the tables and figures for the third quarter of this broadcasting season; i.e. for April to June 2010. For each set of data analysis two sets of tables are given: unweighted and weighted tables. Although the data is representative of the local population, as expected the total responses of each demographic factor were not proportional to the selected sample for this period. For this reason a weighting was given to each respondent, depending on their demographic characteristics, so that the final analysis would be representative of the chosen sample. In the calculation of the weighted data, the totals may not tally due to the rounding-off of numbers.

For the assessment period of October 2009 to September 2010 slight ameliorations were introduced:

- For both radio and television, the two questions relating to the type of reception used in households was changed: while respondents were previously asked to identify the most used reception platform in their homes for radio and tv, from this assessment period respondents were asked to list the different platforms used for both radio and television thus allowing for multiple replies;
- A new question was introduced: "Which are your three most favorite programmes on local television stations". The interviewers were instructed to list the names of programmes mentioned by the respondents without the verification to actual programmes broadcast during each assessment period.

During the previous assessment period of April-June 2010 and at the beginning of this assessment period the FIFA World Cup Championship was held in South Africa with the first match being held on Friday 11th June; ending on 11th July with the final match. During this assessment period the final phase of the FIFA World Cup Championship took place during the first eleven days of July.

1. METHODOLOGY AND SAMPLE COLLECTION

Data is to be collected by means of telephone interviewing conducted by National Statistics Office interviewers continuously during the period 1st July to 30th September 2010. NSO interviewers are instructed to make interviews between 04:00pm – 08:00pm on weekdays and between 09:00am – 1:00pm on weekends, and are instructed to call-back individuals up to 3 times before interviewing the next person in their list. This is mainly to avoid any bias that could be introduced among gender and age.

As in previous audience assessments, the National Statistics Office selected the sample, administered the survey and collected the data that was passed on to the Broadcasting Authority for analysis. The net sample size over a one year is to consist of around 7300 units (over four quarters covering 365 days) resulting in the desired target average of 20 daily interviewees. A stratified random sample based on gender, age and district population distribution was selected by the National Statistics Office allowing for a 50% response rate.

A further modification made is the inclusion of those respondents who are deceased or live in an institution. These have been classified as 'ineligible'; previously such cases were classified as non-contact.

For the period July-September 2010, 1835 individuals [54.32% of contacted persons] accepted to participate in the survey and, on average, responses were evenly spread out during the whole period; this was 4.21% lower than that of the previous assessment period of April-June 2010. Table 1.1 below gives a breakdown of responses achieved.

The target population for this survey consisted of Maltese residents aged 12 years and over, living within private households. The respondents' households were selected using systematic random sampling from a database containing all individuals maintained and known only to the N.S.O. – respondents' personal data are only known to N.S.O. Officials and such data is **not** forwarded to the Broadcasting Authority. Each individual has an equal and independent chance of being chosen. All the data that was collected was subject to a series of quality checks by vetters. Apart from this, the data entry programme has a number of in-built validation rules in order to limit the errors of data inputting.

1.1 The Accuracy of the Results

How well the sample represents the population is gauged by two important statistics – the survey’s margin of error and the confidence level used. The margin of error is the amount of error inherent in the results due to sampling and depends on the size of the sample – a lower margin of error requires a larger sample size. A common choice as an accepted margin of error is that of **±5%**. The confidence level is the amount of uncertainty that can be tolerated. Typical choices are 90%, 95% and 99% confidence – a higher confidence level requires a larger sample size.

For the period of July-September 2010, with a response rate of 54.32%, a population size of 410290 [aged 12 years and over]¹, and a 95% confidence level, the sample of 1835 interviewees has a margin of error of $\pm 2.27\%$.

1.2 Comparison to Previous Assessments and Absolute Data

Although all the tables and charts for each assessment period have similar methodology in formulation, the sample base varies depending on the rate of response during each analysis period. For comparative purposes, data is always presented as percentages rather than absolute figures. However, due to repeated requests for calculations to be extrapolated over the whole population, calculations have been made for the absolute value of 1% in each table. Of note is that in the extrapolation of such absolute data, differences arise due to rounding off of percentages in the tables. See Appendix F for further explanations of calculations.

The differences by age groups, gender and region between the sample and the population based on the latest data as published by the National Statistics Office are detailed in Table 1.2 below. For proper calculation of absolute numbers, the percentage difference between the sample composition by category and national distribution of the population data should be weighted against all the tables, charts and figures in this analysis.

Absolute figures and percentages in “Weighted Tables” do not tally due to rounding off of data. The responses of all interviewees have been weighted by the NSO so that the actual sample taken is representative of the selected sample at the start of the broadcasting season.

^b Percentages are based on Total Population by Region as listed in Table 9 of the Demographic Review 2007 – see also Appendix B.

2. SAMPLE PROFILE

For this analysis, the demographics included gender, age and location of households by geographic district. The ages of respondents were grouped according to demographic categories used by NSO for World Population Day 2009 (D.O.I Press Release 122/2009); while demographic location of respondents was based on the same distribution as that used for the Demographic Review 2007 which is estimated using the 2005 Population and Housing Census figures as basis.

The minimum and the maximum age of respondents for this quarter under review and for the previous four quarter assessment periods, as well as the 'range' of respondents are listed below:

Respondents' Age:	Minimum	Maximum	Range
October – December 2008	12	99	87 years
January – March 2009	12	91	79 years
April – June 2009	12	96	84 years
July – September 2009	12	96	84 years
October – December 2009	12	91	79 years
January – March 2010	12	93	81 years
April – June 2010	12	94	82 years
July – September 2010	12	92	80 years

Tables and Figure 2.1 below give the profile of the sample by age group, by gender and district. Further details about sample distribution are given in Tables 1.1 to 1.3 in Part Two of this report [Tables 1.1a, 1.2a and 1.3a are the weighted sample profiles].

3. LISTENING AND VIEWING PATTERNS

Participants were asked which station they had watched or listened to for at least ten minutes the day before the interview. For this section no cognizance is taken of the time spent by consumers listening/viewing their reception sets.

3.1 Radio Reach by Demographics

This data has been repeatedly monitored since October 2006. Radio zapping with “No Particular Radio Station” has maintained the less than 10% of all those interviewed – reaching its lowest mark of 1.034% during the assessment period October-December 2009; while regular radio listening was maintained with just over/under the 50% level. There was a 0.485% increase over the same period last year – see summary Table and Figure 3.1 below and Tables 3.1-3 [and 3.1a-3.3a for weighted data] in Part Two.

What is evident is that radio listeners have constantly exceeded non listeners by about 10% for the past six broadcasting seasons since April-June 2009.

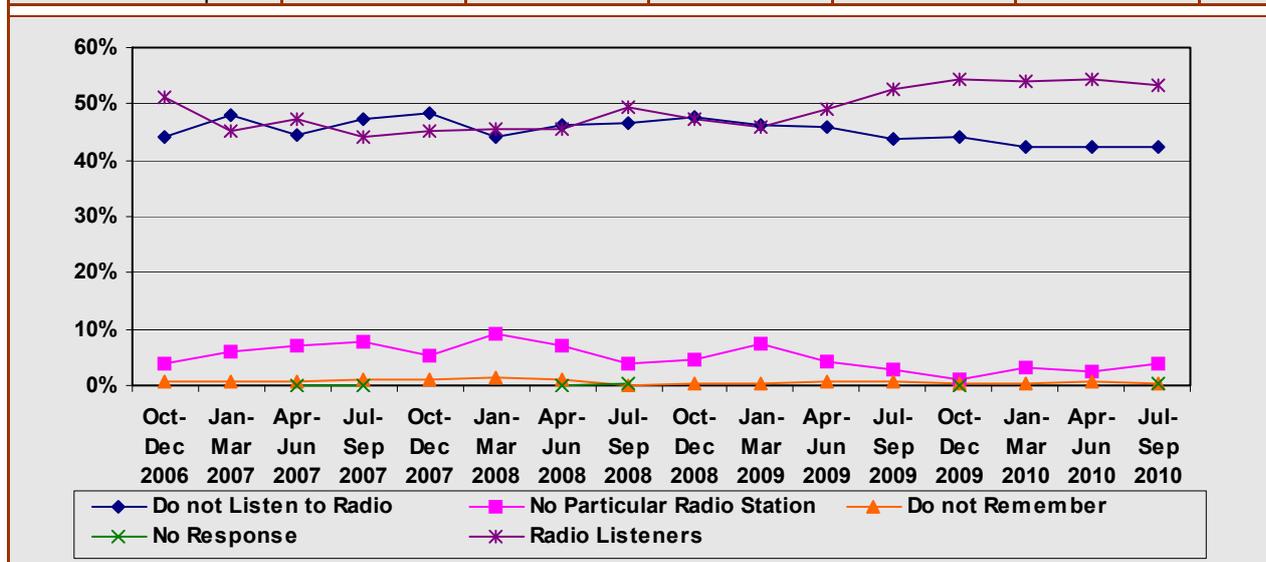

FIGURE 3.1: RADIO REACH BY QUARTERS [OCT/DEC 2006 – JUL/SEP 2010]

The total number of radio listeners [i.e. excluding those who “do not listen to radio”; “did not remember”; “did not follow any particular radio station”; and “no reply” – **and excluding the amount of time followed by each listener**] were analysed by broadcasting station and the data is summarised in Table and Figure 3.2 below. This data gives the effective percentage of radio listeners that each radio broadcasting station has attracted. Similar to previous assessment periods the number of radio listeners captured by each broadcasting station has been maintained throughout with Bay Radio attaining the highest percentage average of 21.34% of total listeners; ONE Radio obtained the second overall average of 12.34; while Calypso Radio attained the third best average audience reach of 11.48% of all radio listeners. Interesting to note that the audience-reach of Bay Radio totals 89% of the total audiences of the next two radio stations added together; i.e. ONE Radio and Calypso Radio.

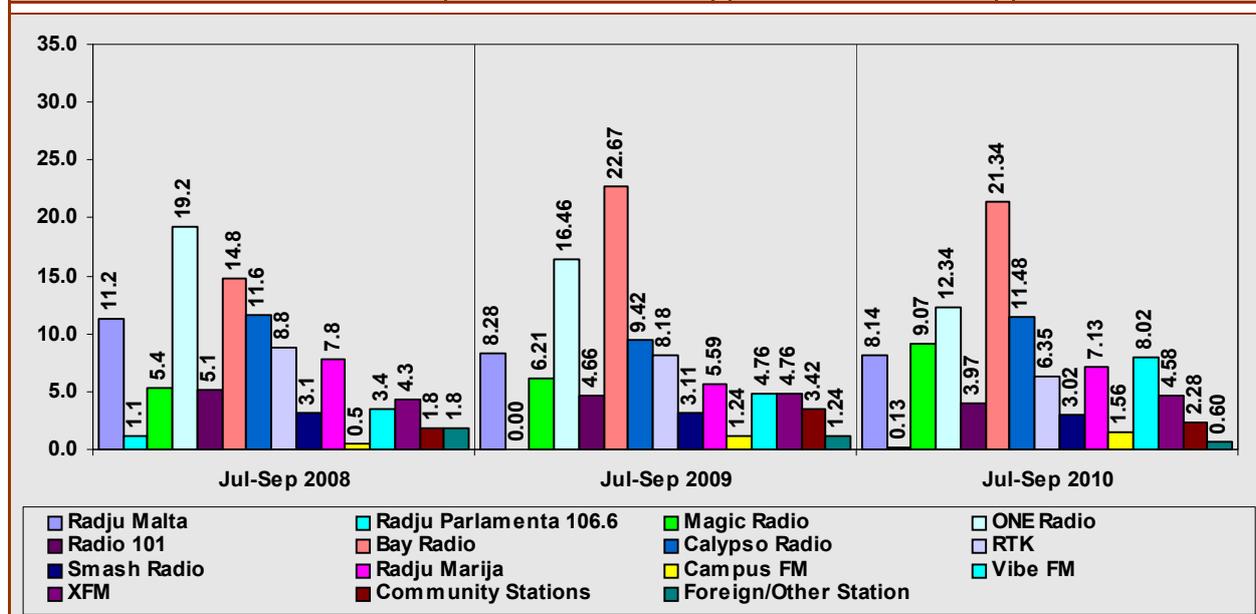

FIGURE 3.2 RADIO REACH BY BROADCASTING STATION BY QUARTER [JUL/SEP 2008-2009-2010]

3.1.1 Radio Reach by Gender and by Age Group

Of the effective listening population, over all the whole of this broadcasting season, Bay Radio is the most preferred station and exceeding the second preferred station, ONE Radio, by 9.0% [9.8% in Apr-Jun 2010; 9.32% in Jan-Mar 2010]. Calypso Radio was the third most preferred station with only a very slight lower reach level than that of ONE Radio – by 0.86%. These rankings are not the same for both Males and Female listeners: while the second most preferred station for males was Calypso Radio, One Radio was the second most preferred for females which was also the third most preferred station for males; the third most preferred station for females was Radju Marija.

Within the different age groups Bay Radio attracted the highest percentages from the lowest four age groups, practically all those under 50 years old, with remarkable percentages for the 12-14, 15-24 and 25-29 year olds. Calypso Radio got the highest ranking of those in the 50-64 age group; One Radio for those between 65-79 years old; while those over 80 years old preferred Radju Marija. The second and third ranking in each age group varies from station to station: One Radio [50-64 and 80+] and Vibe FM [15-24 and 25-29] were the second most preferred station of two age groups; while Magic Radio was the third most preferred station in three age groups [12-14, 15-24, and 30-49]

This diversity in station reach indicates that although national broadcasting radio stations nearly all cover demographics by gender and age group, they are clearly targeting sectoral groups within the local radio broadcasting scenario.

3.1.2 Radio Reach by District

Analysed by district, Bay Radio was the most preferred station in all – see Table 3.4 below. ONE Radio was the second preferred station in two districts and the third most preferred station in three other

districts. Calypso Radio was also the second ranked in two districts; while Radju Malta and Vibe FM were the second most preferred station in one district.

3.2 TV Reach

[For this section each broadcasting stations' reach is analysed compared to the totals. No cognizance is taken of the time spent by consumers viewing their TV sets.]

Similar to radio, data for TV reach has also been monitored for the past three years using the same analytical methods. During this broadcasting quarter the latter part of the 2010 FIFA World Cup were held for which PBS Ltd. had "acquired all media rights for all platforms except mobile rights"²; during which period some broadcasting rights for some second-round matches and one of the quarter-final matches were transferred/shared with the cable platform operator, Melita Cable plc.

PBS Ltd. broadcast 49 out of the 64 World Cup games while Melita Digita, which bought the pay tv rights from PBS Ltd showed all the 64 games of the Finals' phase, both in High Definition as well as Standard Definition. On the other hand, RAI broadcast only 25 out of 64 games in the finals' phase, while Sky Italia broadcast the entire finals' phase³.

Television reach has slightly decreased [-4.196%] over the previous period of April-June 2010. There was also a slight increase [+2.126%] in the number of viewers who stated that they did not watch TV; while similarly to the previous quarter no one stated that they do not have a TV set at home – see Table 3.5 and Figure 3.3 below.

The overall counts of effective respondents [i.e. excluding those who “do not have a TV-set”; “did not watch TV the day before the interview”; “did not remember which station they had followed”; and those who “did not watch a particular station” – **and excluding the amount of time followed by each viewer**] are given in Figure 3.6 and Table 3.4 below. This data gives the effective number of TV viewers [expressed as percentages] that each broadcasting station has attracted for the last quarter of each broadcasting season at 2008, 2009, and 2010. Analysed by broadcasting quarter, **of the local broadcasting stations** TVM has maintained its prime position throughout. TVM was slightly superceded by the total of “Other TV Stations” watched by respondents – a list of which can be found in Table 3.6 of Part Two of this report.

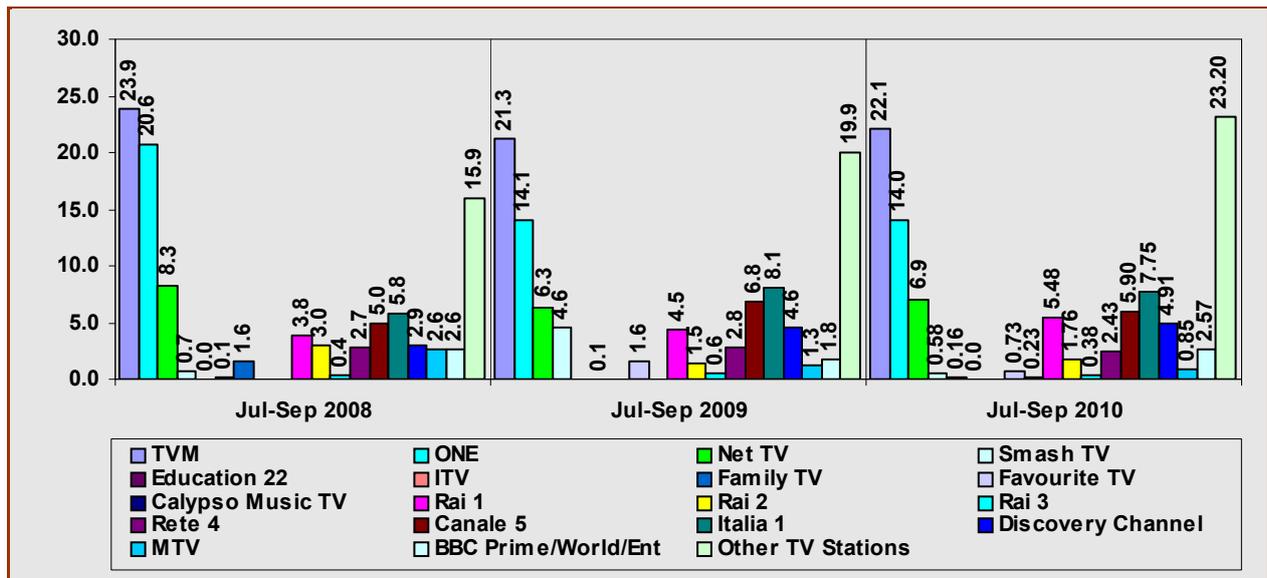

FIGURE 3.4 TV REACH BY BROADCASTING STATION BY QUARTER [JUL/SEP 2008-2009-2010]

3.2.1 TV Reach by Gender and by Age Group

During the summer period foreign TV stations were the most followed stations by gender for both males and females and for the three lowest age groups from 12 years olds to 30 year olds. TVM was the most followed station for the next three age groups: 30-49, 50-64, and 65-79; while One was the most followed station for those over 80 years old. Of note is the preferences achieved by foreign broadcasting stations especially Italia 1 which attracted second preferences for two age groups [15-24 and 25-29] and third preference of the 12-14 year old. The second preferred station of this latter group goes to One indicating that this age group was more catered for in One’s programming content – see Table 3.7 below.

3.2.2 TV Reach by District

For the fourth quarter of the broadcasting season of 2009-2010, TVM was the most followed station in three districts and the second most followed station in the other half of the districts – see Table 3.8 below. While Other TV station was the most followed station in three of the districts, it ranked second in two other districts and third in one other district losing its ranking to One in the Southern Harbour area where it ranked the second most preferred station after TVM and the third most preferred station in all the other districts.

4. MEDIA RECEPTION PLATFORM

Unfortunately, in many cases respondents are not aware what specific type of media platform they are using for listening and viewing their radio and television sets; especially so with older generations. Most often interviewers asked the respondents to describe the system used in the latter's household to determine the type of media platform used. And those respondents who were uncognitive of such systems would describe the channel mostly followed; sometimes indicating that they might have satellite reception when in actual fact they had a cable system installed which was re-transmitting satellite broadcast stations.

Well knowing that certain households may have more than one system installed, this kind of assessment was reconsidered. From this broadcasting season [Oct 2009/Sep2010], the question asked to respondents was changed to the effect that they were asked whether they had a specific media platform installed in their household [being described by the interviewer if necessary]; while at the same time allowing for multiple replies.

During the previous broadcasting quarter [April-June 2010], a further refinement was made. With regard to radio systems used, it was pointed out that a number of respondents were listening to radio channels broadcast on their TV systems offered locally through the cable and digital aerial operators. From this quarter these respondents were no longer being included under Digital Radio but included under Other System/s which would also include other radio listening devices as Mp3 players and Internet streaming.

With regard to television broadcasting platforms used by households, some refinements were also made in view of the introduction of High Definition broadcasts on cable and digital aerial platforms prior the April-June quarter. Aerial (Analogue) was restricted to include only the reception of free-to-air reception; Cable was to include both analogue and digital reception; the Digital Aerial system was restricted to only those systems that include a decoder; while Dreambox users were to be included under Internet TV systems as it has connectivity to DVB satellite, terrestrial and cable digital television receivers, thus:

Q1 & Q2: Oct/Dec 2009 & Jan/Mar 2010

Aerial (Analogue) system installed at home
Cable (NOT Digital) system installed at home

Satellite system installed at home
Internet TV system installed at home

Digital Aerial system installed at home

Other TV system installed at home
No TV at home

Q3 & Q4: Apr/Jun & Jul/Sep 2010

Aerial (Free-to-air) installed at home
Cable (Analogue or Digital) TV system installed at home

Satellite TV system installed at home
Internet TV system (incl. Dreambox) available at home

Digital Aerial system (with decoder) installed at home

Other TV system installed at home
No TV at home

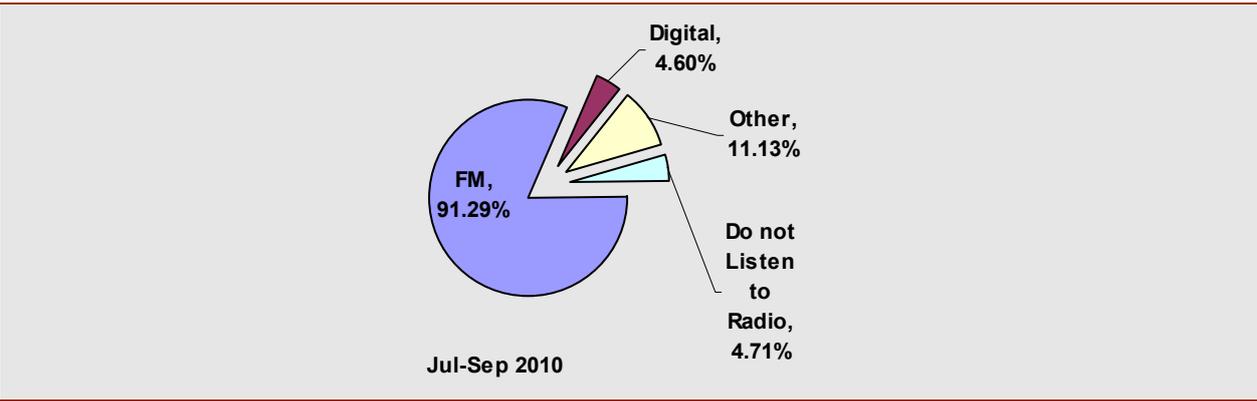

The data for this analysis is derived only from persons living in the archipelago – no institutions, of whatever kind are contacted. It is therefore representative only of household reception platforms used and not of national digital uptake.

4.1 Radio Reception Platform

Respondents were asked to indicate what type of reception platform they have at home choosing from “FM”, “Digital”, “Other System” and “Do not have a radio-set at home” while allowing for multiple replies. While 4.71% of all those interviewed replied that they do not have a radio-set at home, 11.73% of the respondents indicated that they have more than one system of radio reception in their households – see Table and Figure 4.1 below.

4.1.1 Radio Reception Platform by Gender, Age and District

During this assessment period the indications are that while there is little gender difference in Digital radio takeup, the younger age groups have twice the average total Digital radio take-up. The same can be said with regard to “Other” systems of radio listening especially when these include Internet Radio. Analysed by districts, digital radio take-up, albeit small, is nearly evenly spread over all the districts – see Table 4.2 below and Figure 4.1.a in Part Two. However, the Northern Harbour area had the highest percentages for Digital Radio systems and for Other Radio Systems available at home.

Compared to the Radio reach by quarter there is a discrepancy between those who stated that they “do not listen to radio” [see Table 3.1, Part Two] and those who stated that they do not have a radio set. The difference lies between those who do not listen to radio but have a radio set at home. The percentages of Figure 4.1 above for “did not listen to radio” include the residual replies of those who throughout

maintained that they do not listen to radio but may also includes a small percentage who stated that they had listened to a particular radio station the day before but do not have a radio set.

4.1.2 Radio Reception analysis by Platform

To further understand the diversity mix of media platforms further analysis was made: the replies for each platform were analysed up to one other media platform available per household indicating the multiplicity of radio platforms – see Table 4.2a: Radio Reception Systems by Platform and by Quarter. Thus all the replies of each respective platform were analysed on whether each respondent indicated whether they have other systems available.

4.2 TV Reception Platform

On the other hand, digital television broadcasting is available through various platforms. With this in mind, respondents were asked to indicate on which broadcasting platform they receive their household television broadcasts while allowing for multiple replies. Table 4.3 and Figure 4.2 below detail the percentages registered for the various broadcasting platforms by quarter from October-December 2009 to this quarter under review. Further data is available in Part Two of this report. Of note is that while only 4.86% of households declared that they have more than one radio system, for television the number of households that have declared multiple systems amounts to 57.8% - an increase of 3.1% over the previous assessment period.

At this point it is important to note that by early 2011, all analogue broadcasts will be switched off and local broadcasting stations should be broadcasting free-to-air on a separate digital platform.

4.2.1 TV Reception Platform by Gender, Age and District

There was very little gender difference in the types of television reception used except for “Other TV Systems” and where there is a high female imbalance. Internet TV viewing was highest with the 15-24 year olds [37.5%] followed by the 30-49 year olds [33.3%]; while distribution of the different systems between the different districts was quite balanced throughout – see Tables and Figures 4.2.a in Part two of this report.

4.2.2 TV Reception analysis by Platform

Similar to radio, all the replies given by respondents for each television platform were analysed for the multiplicity use of other platforms in the same household. As can be seen, although there was an increase in the use of roof-top aerial during the first three quarters of the 2009/2010 broadcasting season, there was a decrease of such aerials during the last quarter. Of note is that the effective singular use of the roof-top aerial has steadily increased from 9.41% for October-December 2009 to 5.12% during July-September 2010 - see Table 4.4.a: TV Reception Systems by Platform and by Quarter below:

5. TEleshopping

Again, the Authority wanted to research Teleshopping originating from the Maltese Islands. Respondents were asked whether they regularly watch teleshopping and on which channel such programmes are followed. Teleshopping programmes are aired on local broadcasting stations, generally during the off-peak hours during the day. There is only one channel [iTV] completely dedicated to 24/7 Teleshopping.

For this broadcasting season only 10.4% stated that they regularly watched Teleshopping programmes. Overall, of the effective teleshopping programme viewers, 4.0% stated that they did not know which teleshopping programme they had watched while the most followed teleshopping programme was that broadcast on Net TV [27.98%], followed by Smash TV [26.91%] and ONE [15.91%] – see Table 5.1 and Figures 5.1-2 below; and Tables 5.1-2 in Part Two of this report.

Again, data is being reported as collected – there is no teleshopping on Education 22 while Family TV has ceased operations.

5.1 TEleshopping BY GENDER, BY AGE GROUP, AND BY DISTRICT

During this broadcasting period the highest number of viewers watching teleshopping was registered by Net TV – both in number and by gender. By broadcasting station and excluding Education 22 and Family TV, the highest percentage for females watched teleshopping on other stations while for males they did not know on which station they had watched teleshopping. For this period the effective teleshopping audience by age group was predominantly of those who were in the 30-49 age brackets; while the two youngest age groups [12-14 year olds and 15-24 year olds] were also attracted to Teleshopping. Analysed by district, teleshopping is spread over all the districts with the highest percentages attained by local broadcasting stations being concentrated in two district areas – the Southern Harbour and the Northern Harbour; while Gozo and Comino attracted the lowest percentage at 7.7% – see Table 5.2 and Figure 5.3-5 below.

6. RADIO AUDIENCES

Respondents were asked to state at which times they started and stopped listening to their radio. These time brackets were listed by the interviewer as time start-up and time-ending. The 24-hour clock was divided into half-hour brackets and each time-period was recorded separately. Thus, a listener spending two-hours of radio-listening from 08:00am to 10:00am as recorded by the interviewer was counted four times.

These counts were then grouped according to the listening-day of the interviewee, and all the counts for each respective week-day were grouped together, thus forming the basis of radio consumption by week-day. The results given are the totals for each particular sub-sample for that week-day.

6.1 WEEKDAYS-AVERAGE AUDIENCE SHARE

The Weekday-average Audience Share for all the week-days by radio broadcasting stations is presented in Table 6.1 and Figure 6.1 below and Table 6.4 in Part 2 of this report. Overall, Calypso Radio has attained the highest daily average [1.164%] with its highest average being on Fridays [1.863%]. This was followed by two stations – Bay Radio [1.095%] and One Radio [0.941%] – with the next highest daily average, with both Bay Radio and One Radio also reaching their highest weekday-average on Friday [Bay: 1.582%; One Radio: 1.192%].

6.3 DAILY AUDIENCE SHARE

The following figures map in detail the daily audience shares for radio broadcasting stations at half-hour intervals. The Figures 6.3.a – 6.3.g below are taken from Tables 6.3.a – 6.3.g in Part Two of this report, which represent the total audience counts as a percentage of the total for each particular week-day. Included in the tables are statistics for (a) the daily average audience; (b) the highest daily peak audience; and (c) the standard deviation – for each particular broadcasting station.

7. TV AUDIENCES

Respondents were asked to state at which times they started and stopped watching their TV-sets. The time brackets were listed by the interviewer. The 24-hour clock was divided into half-hour brackets, with the exception of main news broadcasts where the clock-hour was divided into quarter-hours.

The counts of each half/quarter clock-hour were grouped according to the viewing-day of the interviewee, and all the counts for each respective week-day were grouped together, thus forming the basis of television consumption by week-day. The results given are the total for each particular sub-sample for that week-day.

7.1 WEEKDAYS-AVERAGE AUDIENCE SHARE

The Weekday-average Audience Share for all the week-days by television broadcasting stations is presented in Table 7.1 and Figure 7.1 below and Table 7.4 in Part 2 of this report. Overall, of the local TV broadcasting stations ONE has attained the highest daily average [1.0797%] with its highest average being on Mondays [1.332%]. This was followed by TVM [1.007%] with the next highest daily average and reaching its highest average on Mondays [1.289%]; and Net TV [0.420%] with its highest on Fridays at 0.649%.

The Weekday Peaks attained by each TV station are summarised in Table 7.2 and Figure 7.2 below. Compared to Table 7.1 above, while TVM's peak audiences for each day (as listed in Table 7.2 below) are higher than those of ONE, the daily average audiences of TVM (as listed in Table 7.1 above) are lower than those of ONE.

7.3 DAILY AUDIENCE SHARE

The following figures map in detail the daily audience shares for television broadcasting station by half/quarter-clock hour. The Figures 7.3.a – 7.3.g below are taken from Tables 7.3.a – 7.3.g in Part Two of this report, which represent the total audience counts as a percentage of the total week-day audiences. Included in the tables are the same statistics as those calculated for Radio consumption for each particular broadcasting station; i.e. (a) the daily TV average audience; (b) the highest daily peak TV audience; and (c) the standard deviation.

8. RADIO AND TV CONSUMPTION

Calculating the average number of hours that radio listeners and television viewers spend on a daily basis listening/viewing their reception media is another data that has been computed for this period. This would indicate the number of hours that consumers were captured by the respective broadcasting stations; or rather for how long did each broadcasting station manage to maintain, on average, its audiences.

8.1 Daily Hours of Radio Consumption

The total number of hours spent by consumers was analysed by broadcasting station and divided by the total number of consumers per station. The total effective Radio hours spent by consumers for this period stands at 3.09 hrs. The analysis by Radio station is represented in Table 8.1 and Figure 8.1 below:

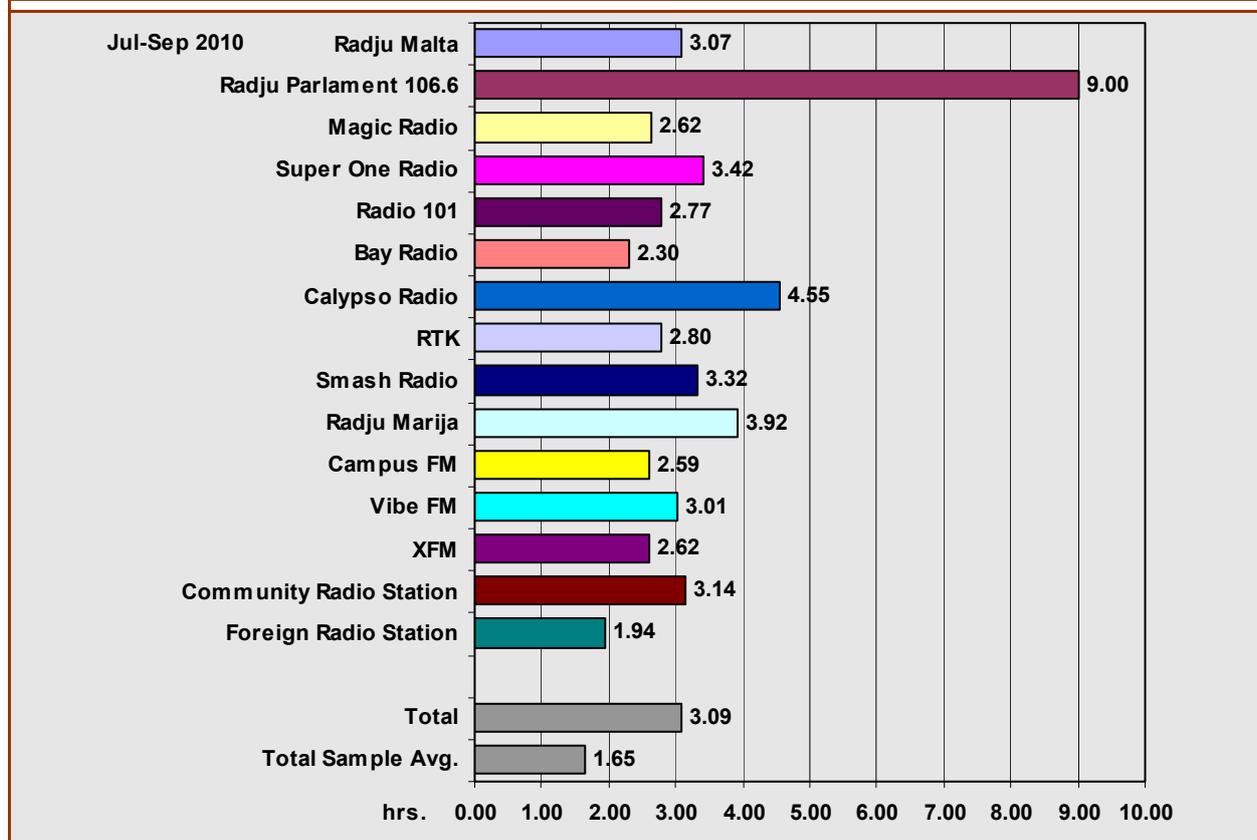

FIGURE 8.1: RADIO DAILY CONSUMPTION BY HOURS AND BY STATION [JUL-SEP 2010]

The high amount of daily hours of radio listening attributed to Radju Parliament [9 hours daily of radio listening] were registered by one listener only. Similar occurrences with other stations are also present in the sample; however these are averaged out over the total number of listeners of each particular station. The range of radio listening varies from one-half hour every day to 12-16 hours of daily radio listening.

Taking the total number of hours of radio listening over the total sample of people interviewed including those who did not listen to radio, the overall average hours of radio listening spent by consumers for this period stands at 1.65 hrs every day.

This data has been compiled using similar data collection and analysis methods since October 2006. Taking all the data by quarter it can be seen that the total number of hours that regular radio listeners spent listening to programmes has decreased by more than 29.9% from 4.41hrs for Oct-Dec 2006 to 3.09hrs for this period under assessment. Taking the total sample [i.e. including those who do not listen to radio] the overall decrease for the whole period from 2006 to-date is of 26.9% indicating that more people are turning to other forms of media platforms – see Table 8.2 and Figure 8.2 below.

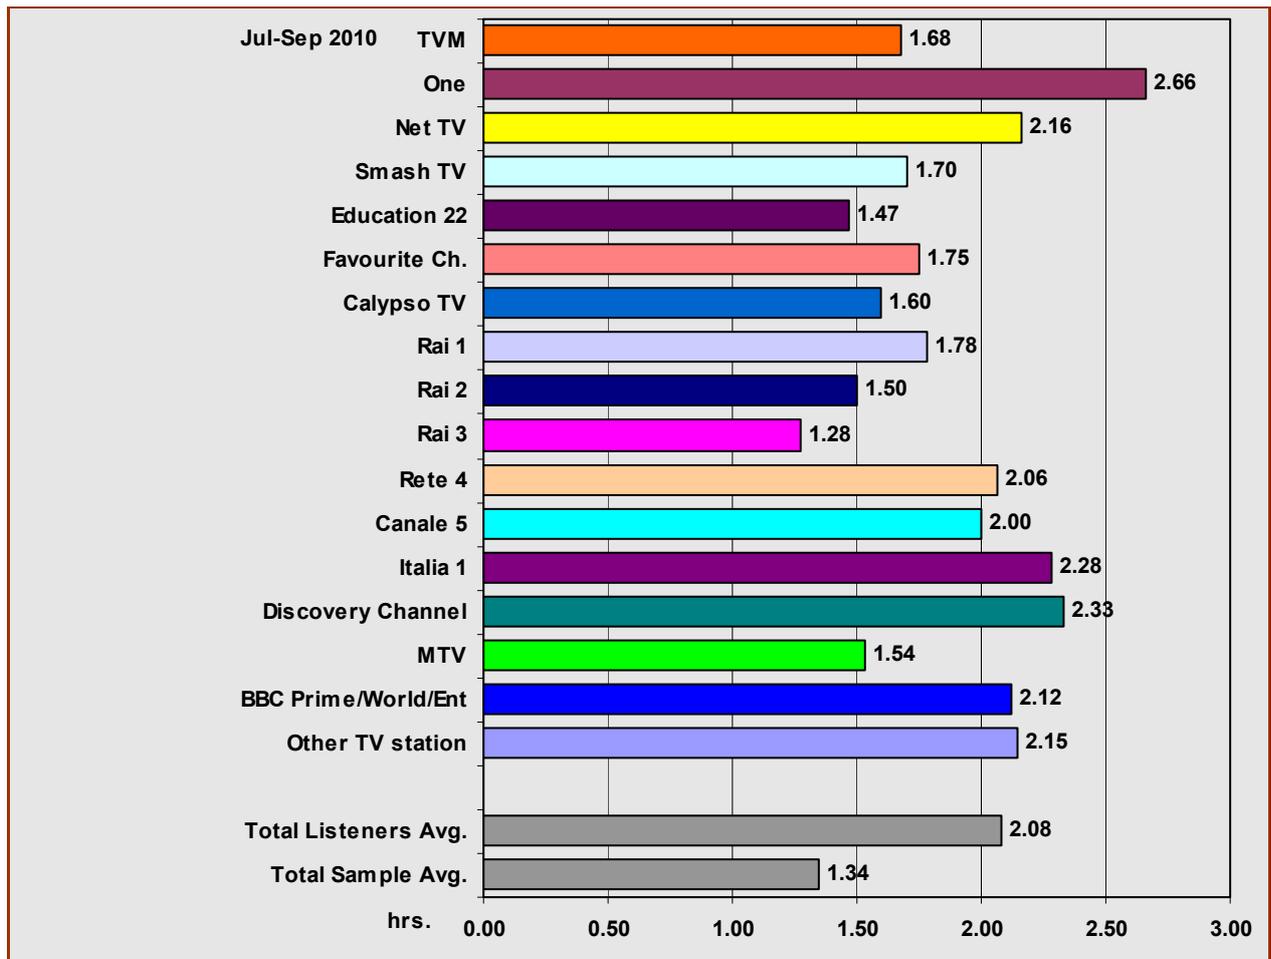

FIGURE 8.3: TV DAILY CONSUMPTION BY HOURS AND BY STATION [JUL-SEP 2010]

Taking the total number of hours of TV viewing over the total sample of people interviewed, the national average hours of TV viewing spent by consumers stands at 1.34hrs every day.

Similar to Radio data has also been compiled using similar data collection and analysis methods since October 2006. Taking all the data by quarter it can be seen that the total number of hours that regular TV viewers spent watching to programmes has decreased slightly from 2.35hrs for Oct-Dec 2006 to 2.08hrs for this period under assessment – see Table 8.5 and Figure 8.4 below:

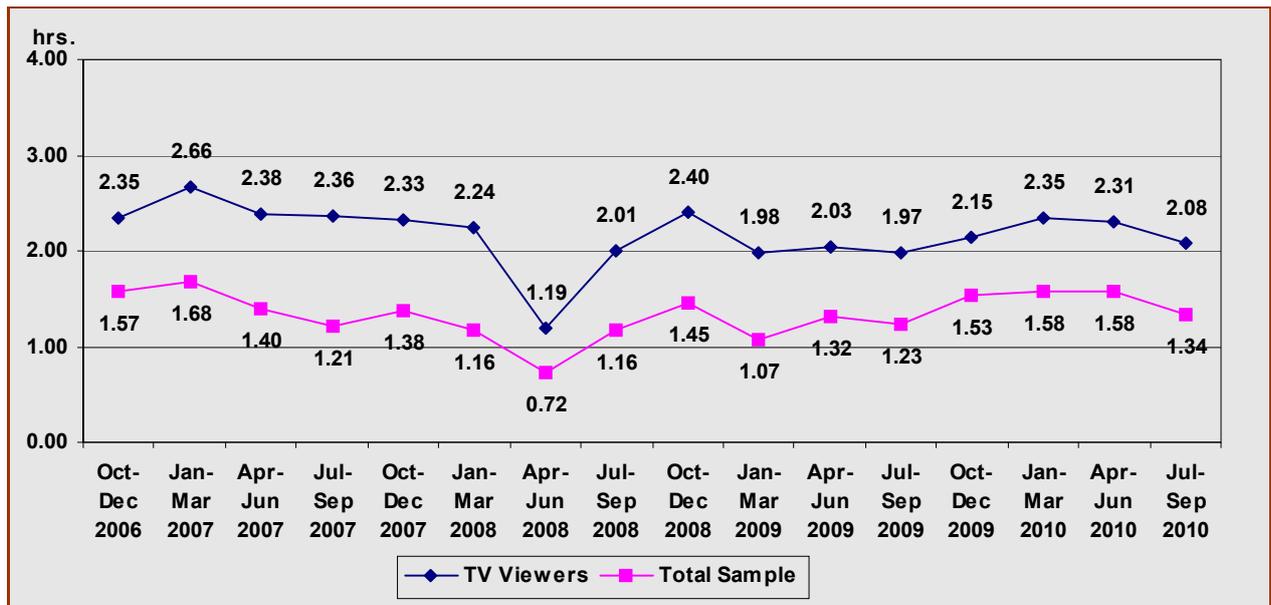

FIGURE 8.4: TOTAL DAILY TV AVERAGE CONSUMPTION BY HOURS [OCT/DEC 2006 – JUL/SEP 2010]

The total number of hours spent by the consumers registered for each broadcasting station, divided by the total number of consumers per station were analysed separately and depicted in the following table:

8.3 Radio Consumption by Time Brackets

The same time-brackets used in previous audiences was again used for this analysis: radio and TV consumption was analysed by such broad time-brackets to highlight consumption trends at different time-periods of the 24-hour clock.

Data for this analysis was taken from the counts of all viewers and listeners while taking into consideration the time spent. The data was analysed first in total by demographic factors as gender, age group, and district and by time period (weekday and month) – see Table 8.7 and Figure 8.5 below. The same counts were then analysed by broadcasting station; the summary of which is listed in Table 8.8 and Figure 8.6 below. Each station's data was then analysed by broadcasting station and is found in Part Two of this report.

8.4 TV Consumption by Time Brackets

The same systematic analysis as in the previous section was repeated for TV – see Tables 8.9-10 and Figures 8.7-8 below and Part Two of this report.

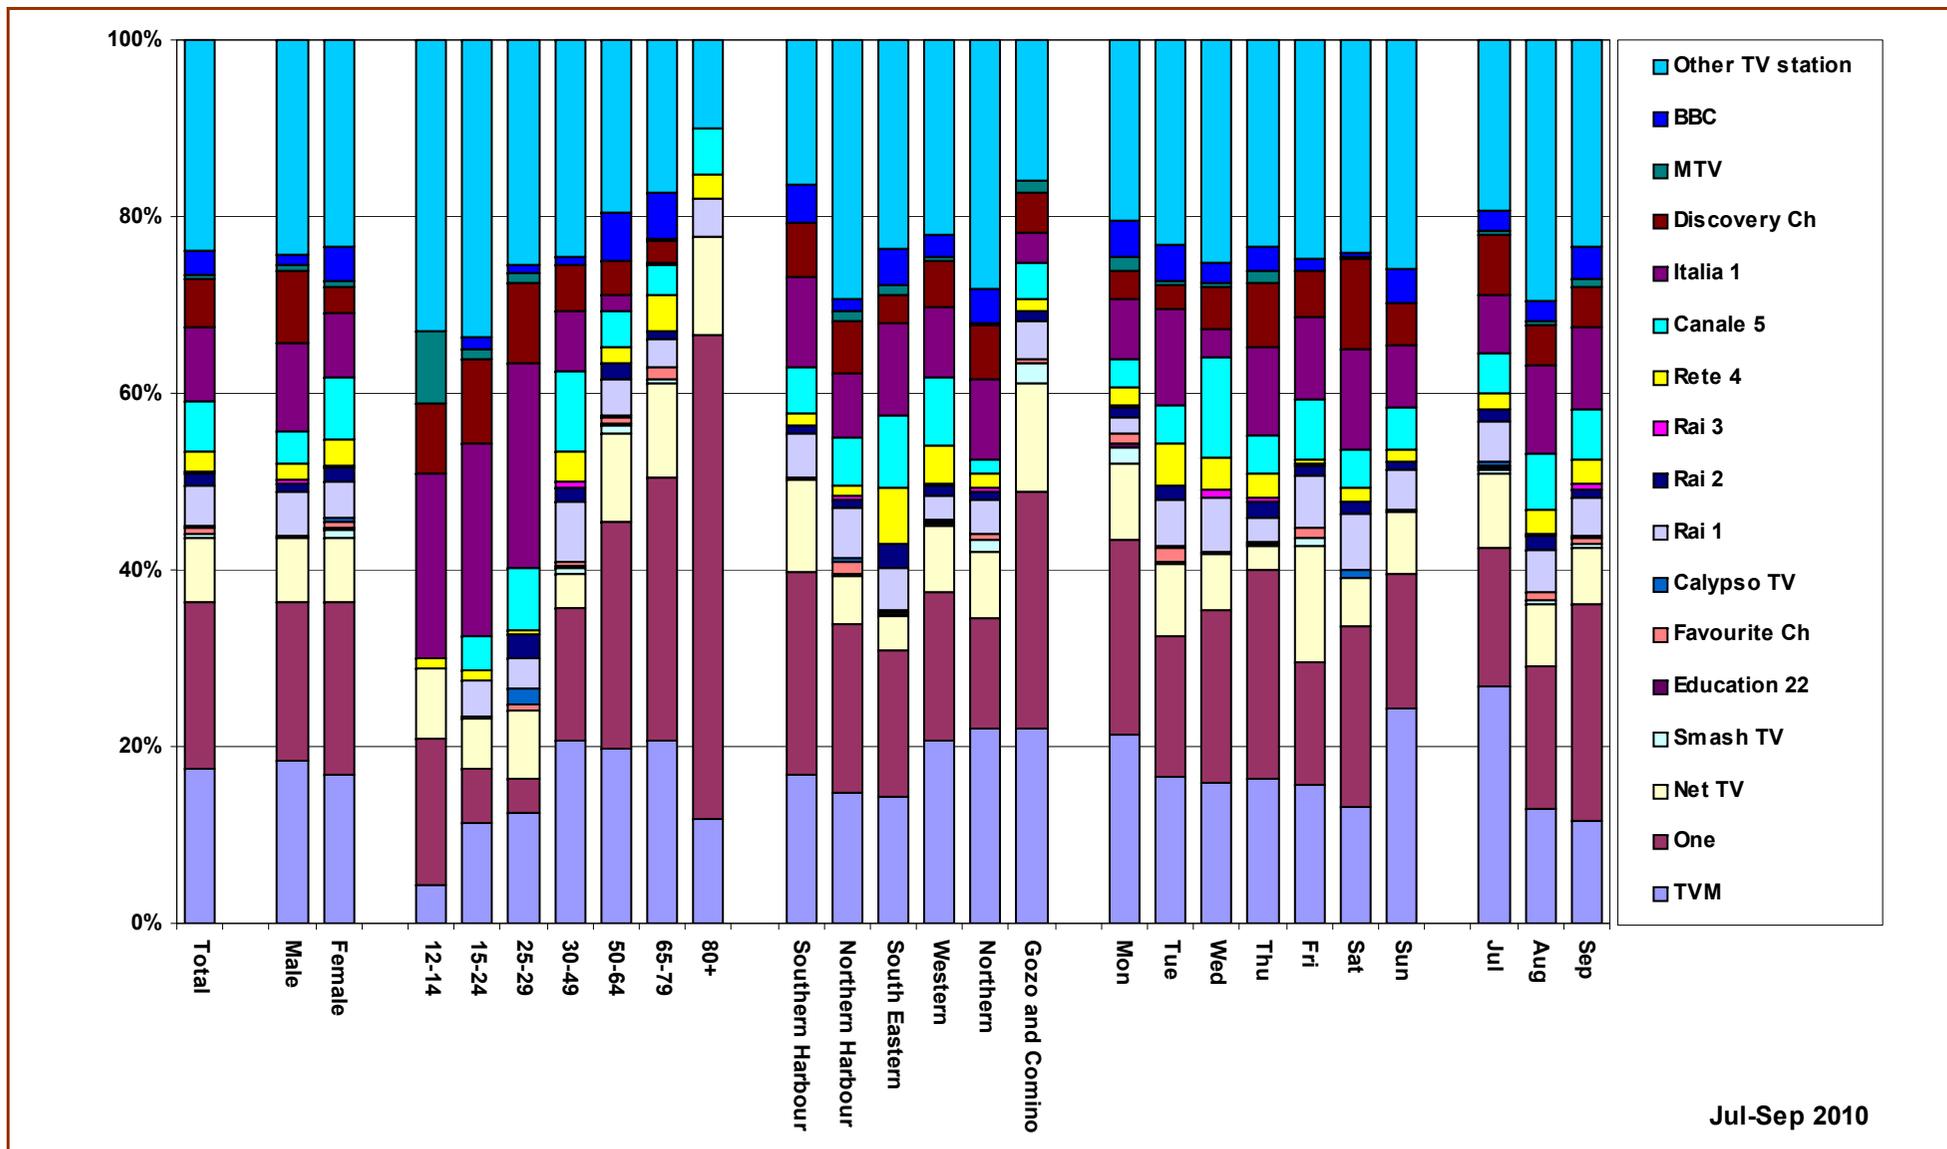

FIGURE 8.8: WEIGHTED TV AUDIENCES BY STATION: BY GENDER, BY AGE GROUPS, BY DISTRICTS, BY WEEKDAYS, AND BY MONTHS [JUL-SEP 2010]

9. TV PROGRAMME PREFERENCES

From this broadcasting season, the Authority wanted to research television programme preferences of interviewees. Rather than asking what type of programme genre are preferred by local television viewers, it was decided to ask respondents which are the three most favorite programmes on local television stations – the raison d'être being that popular television programmes are difficult to categorise according to their genre as this often depends on the content of each programme broadcast in each series.

Respondents were given the possibility of naming three programmes broadcast on local TV stations while allowing also for two other types of responses: those who stated that they do not regularly watch television; and those who stated that they do not watch local television programmes. Out of all respondents, 38.57% (708 respondents) stated that they do not have a favorite programme/do not watch TV/do not watch local programmes [Apr-May: 29.5% (536 respondents); Jan-Mar 2010: 25.6% (461 respondents); Oct-Dec 2009: 28.1% (516 respondents)]. Of these, 17.69% [325 respondents] stated that they do not have any preferred programme; 17.21% [316 respondents] stated that they do not watch local TV programmes; while the rest 3.67% [67 respondents] stated that they do not watch TV – see Table 9.1 below:

[Count; Col %; Row %]

The programmes named by the respondents were first classified by the station on which they were broadcast based on published broadcasting schedules as received by the Authority from broadcasting stations for the period of July-September 2010. These were then classified under broad time-brackets as used in the previous chapter. The full list of programmes and their percentage to total programmes quoted is found in Part Two of this report.

Out of all 2376 programmes quoted, there were 11 counts of programmes which were of a generic type while, on the other hand, there were 14 counts of programmes which were not broadcast during this broadcasting quarter but in previous schedules. Out of all the programmes named, TVM got 48.7% of all counts, followed by ONE with 25.6% and Net TV with 22.0% - see Table 9.2 below.

Not included are five programmes which were heavily advertised by broadcasting stations for the next broadcasting season of October-December 2010. These included 7 *Qattiela* [TVM], *Deceduti* [TVM], *Studio 54* [TVM], *Emilja* [One], and *Sibtijiet Flimkien* [One].

APPENDIX F: TABLES AND CHARTS CALCULATIONS

Although all the tables and charts for each assessment period have similar methodology in formulation, the sample base varies depending on such issues as the rate of response during each analysis period; the total sample collected per quarter; etc.

Besides, when analysis is made on individual broadcasting stations all the following are excluded from the calculations made:

- the amount of respondents who did not listen/view any broadcasting station before the interview;
- those who did not remember which broadcasting stations they had listened/watched;
- those who did not watch/listen any particular station; and
- those who did not specify any particular station.

For this reason data of assessment periods is always primarily presented as percentages for comparative purposes. No absolute amounts are calculated.

However, repeated requests for calculations to be extrapolated over the whole population have from time to time been made to the Authority. Although the information required for such extrapolation has always been presented in past audience assessments in Appendix B, it was felt that for ease of comparison the value of 1% in comparison to the whole population be included in each table and/or corresponding chart.

These calculations have been made on the latest available data which, in some cases, would be more than 12 months due. For this reason, these calculations are updated only for the present assessment year – past published data should be carefully evaluated.

These calculations have been carried out for all the tables concerned for the assessment periods October-December 2008, January-March 2009 and April-June 2009 following the publication of Press Release 122/2009 by the National Statistics Office. **It is important to note that such calculations are only for indicative purposes and are not finite. Also, due to rounding-off it is advisable that percentages are primarily quoted.**

1. Calculation for Quarterly Totals

For this purpose, from a total population of the Maltese archipelago of 413,609 people aged 0 and upward as at 31st December 2009, the corresponding population size for those who are aged 12 and over [the age limit of the sample size] amounts to 363,275 [rounded up to 363,300 based on *Press Release 122/2009*; N.S.O.]. When tables and figures include the whole sample size, 1% of those tables is equal to 3633 [3558 for Oct 2006 – Sep 2007 based on *Demographic Review 2006*; Table 5, N.S.O.; and 3594 for Oct 2007 – Sep 2008 based on *Demographic Review 2007*; Table 5, N.S.O.]. In cases where data is worked on **viewers and listeners only**, the following calculations have been made:

Total	3633	3633	3633	3633	3633	3633	3633	3633

Thus; in Table 3.1 and similar tables in previous audience assessments, 1% is equal to 3633 since this table is based on the whole sample; in Table 3.2 and in similar tables, 1% is equal to 1985 for this assessment period of January-March 2010 etc.; due to the fact that four groups of sample respondents have been removed:

- Did not listen to radio the day before the interview;
- Did not listen to any particular radio station;
- Did not remember which radio station they had listened to;
- Did not give any response.

Wherever these extrapolations can be made in the analysis, these are indicated at the end of each table/chart.
